

PVC SHRINK BAGS

Rectangular & Dome Bags

Shrink wrapping provides a crystal clear package. It also provides a moisture and dirt barrier extending the shelf life and prevents pilfering. Shrink bags are quick and easy to use and speed up the packaging operation. Simply insert your product into the shrink bag, seal the open end with a sealer, and shrink the film tightly around the package with a heat gun. Vent holes in the shrink bags prevent ballooning. Shrink bags come in rectangular, square and dome shapes, and many other different sizes.

RECTANGULAR & SQUARE shrink bags are ideal for general all purpose applications in industries such as the music, gift basket, publication, media, soap, candle, and many other industries.

**An alternative way to make spectacular gift baskets using rectangular, square, or dome shape shrink bags is to allow enough film material on top so a ribbon can be tie in place. Then heat shrink the bag around the basket.*

DOME SHAPE shrink bags are commonly refer to as gift basket bags as they are designed specifically for oval and round shaped containers or baskets or baskets with handles. The arc of the shrink bag will fit perfectly around the curvature without leaving "dog ears." The bags are in 100 gauge thickness and have a shrinkage of MD 30-35%, TD 45-50%.

To determine the bag size you need:
 Measure the package around its widest point, add 10% to the number, and divide by 2 to determine the width of your bag. Measure the package around its tallest point, add 10% to the number, and divide by 2 to determine the height of your bag. If the size you need is not available, a larger size can be used because the shrink bag has a 50% overall shrink ratio.
